This project is built  
upon Battery 2030+

Funded by the  
European Union

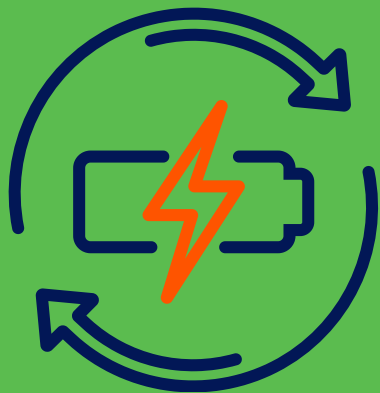

# RENOVATE

A circular and  
chemistry-neutral approach  
for recycling and recovery  
of battery waste feeds

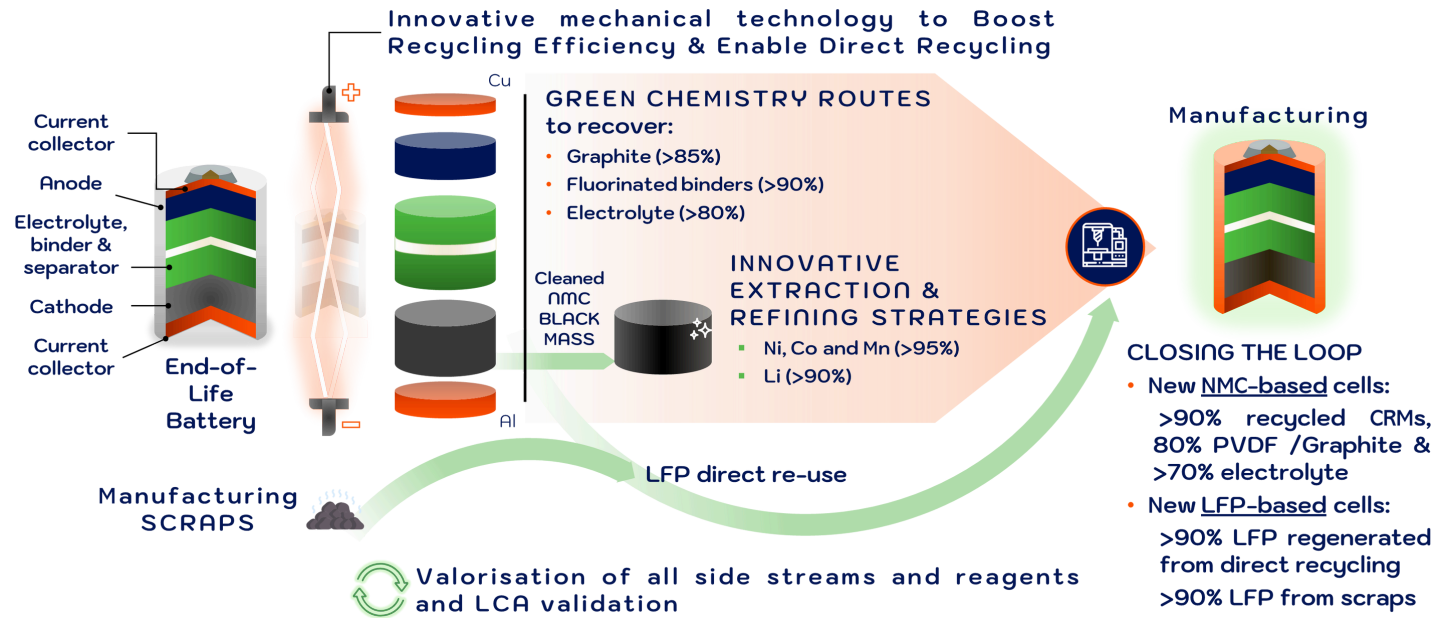

Grant agreement ID: 101137745

# Our mission

RENOVATE aims to develop and demonstrate novel, innovative, and sustainable recycling technologies at TRL4 (lab level validation) for the European battery value chain by recycling and reusing 100% of end-of-life (EoL) batteries, battery components and industrial side streams.

## Integrated approach

## Addressing circularity and continuous monitoring of the regulatory framework

Closed-loop recycling process

Responsible materials that can be re-used “infinite” times

Legislation to incentivise  
Implementable net zero  
carbon process

Digital monitoring and control

Clear and transparent digital  
passport for safe chemical materials

Carbon Footprint Declaration  
Evaluation and design of the  
environmental profile
